

Dock-Door Easy Install

Up to 40% less installation time

alpha opening doors everywhere

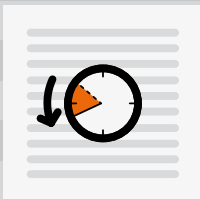

Dock-Door Easy Install

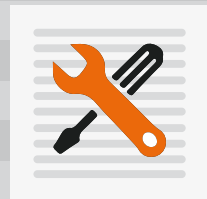

Dock-Door Easy Install

In recent years we have seen more and more large industrial premises being built. These so-called XXL buildings with many loading docks are the result of economic growth and the popularity of online ordering. In such construction projects, a very tight assembly planning is maintained. In order to be able to realise the assembly as quickly as possible, this door has been developed. Alpha does not include the additional costs incurred in production in the sales price. The retail price of this door is the same as the DS version! This increases your chances of acquiring larger projects. The Dock-Door Easy Install is available from 9 (identical) units in 40mm, 60mm and 80mm and is ideally suited for distribution and logistics centres.

Time savings

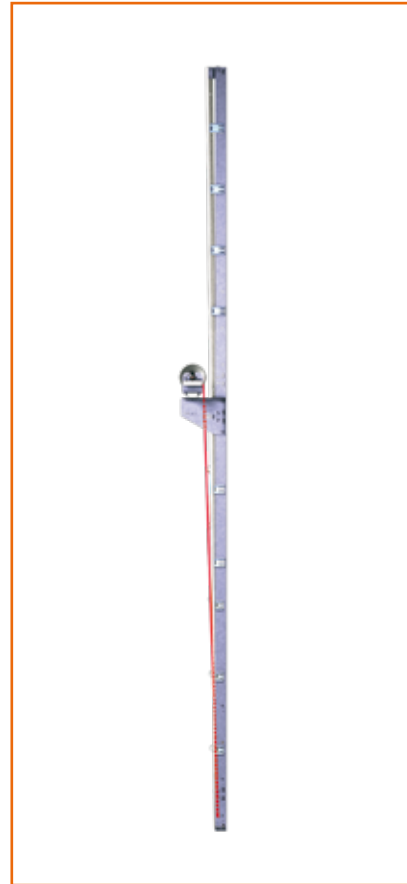

Depending on the situation, the assembly time can be reduced by up to 40%. In practice, this means that instead of fitting 3 doors per day, 5 doors can be fitted in the same time!

Normal rail system: many loose parts

Cable loop

Dock-Door Easy Install: pre-assembled spring package

Moreover, the steel cables no longer run upwards, but directly from the bottom console to the cable drum.

Shorter assembly time

- The Dock-Door Easy Install consists of a sectional door with a lowered spring package.
- The difference with other rail systems is that the spring package is already pre-assembled in our production.
- Previously, these were separate parts that still had to be mounted on the construction site, regularly at a height of >3 metres.

Optimal efficiency

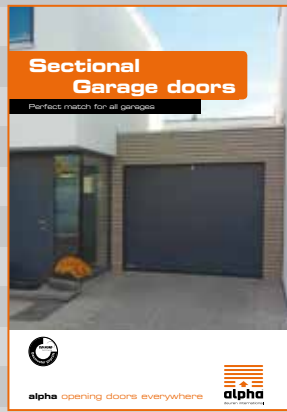

- The Dock-Door Easy Install is packaged differently from the standard doors: panels are packed per 3 doors on a pallet. This allows for more efficient work.
- This solution is also more environmentally friendly because less packaging material is used.
- Less packaging materials are supplied for removal.

Lower costs

- Less packaging materials result in a lower disposal fee.
- Because of the shorter assembly time, in addition to labour costs, additional costs, such as renting an aerial work platform, are also reduced.

The complete package from a single source.

Our production is controlled and in full accordance with strict European laws and norms. We guarantee the highest quality as we only accept components from trusted and preferred suppliers worldwide. In addition and to offer the complete assortment we have forged strategic partnerships with other like-minded producers of Industrial Doors. Uniquely and from a single source Alpha guarantees the complete package with the highest quality.
